

IT'S RIGHT FOR NEW YORK

New Yorkers. Take a look at the nuclear power generated from our Indian Point Energy Center, and you'll know it's right for New York.

Right, because it's Clean

Did you know that nuclear power plants produce no greenhouse gas emissions that contribute to global warming? Zero! Without the Indian Point Energy Center, replacement power plants would have released millions of tons of pollutants into New York's air.

Right, because it's Lower Cost

Right now, nuclear power from Indian Point supplies over 2000 megawatts of low cost power to New York's most critical infrastructure including subways, railways, universities, public schools, and police and fire departments throughout the city and entire region. Without it, we couldn't keep pace with the demand and keep our energy costs lower.

Right, because it's Vital

Indian Point doesn't just generate electricity, it also creates a healthy economy: \$50 million in state and local taxes; \$400 million in payroll and local purchases; thousands of permanent and temporary jobs. And the power from Indian Point is totally home-grown, freeing us from dependency on foreign energy sources.

Right, because it's Reliable

The Indian Point Energy Center, run by Entergy, one of the most respected and experienced nuclear operators in the country, has a proven, award-winning, track record for safety, operating 11 nuclear plants throughout the country.

New Yorkers, you don't have to look very far to find the power that's right for New York. It's already right here in New York. Right at Indian Point.

Safe. Secure. Vital.
